

PERIODIC CATALOG

FOXPRO

"The Caller of the Wild"

FP38™

FP38 Features

- 8 custom or pre-programmed sounds included
- 60 second timer switch
- User programmable (with optional PG-I adapter)
- Tested down to -40° Fahrenheit
- Runs for 20-25 hours on 4 "AA" batteries
- 5 years parts & labor warranty
- Made in the USA

The Model FP38 is the most affordable FOXPRO ever - with features not available in any other unit in its price range. The FP38 is the clear choice for value-conscious hunters who want the best quality caller available yet will still fit in their budget.

Select a custom unit and choose 8 sounds from our selection of over 180 calls, or choose a unit that comes equipped with 8 pre-programmed digital sounds. Choose from Deer, Turkey, Coyote, Crow, Waterfowl, Moose/Elk, Fox, Predators, or the Combo unit. No cassettes, CD's or sound cards to fuss with or become lost or damaged. These sounds can be reprogrammed at anytime by returning your caller to FOXPRO, or you can record your own sounds into your unit using the PG-I Adapter (sold separately).

This super-lightweight caller (less than 1.3 pounds) will operate on 4 "AA" batteries for 20-25 hours depending on volume! A 60 second timer switch allows you to turn on your unit, set the volume and get into position before any sound starts to play. The FP38 also features crystal clear volume that rivals callers weighing five times as much; an external speaker jack; a five year warranty and is made in the USA.

Turkey

FP38™

No other caller on the market is as lightweight, loud, and reliable as my FOXPRO. Not only does FOXPRO produce the best caller on the market, but the sounds are unmatched as well! FOXPRO = The Best in products, sounds, and service!

- Les Johnson

**FP38 Only
Available In:**

ACCESSORIES

Small External Speaker

For our non-remote units, we recommend the use of an external speaker to move the sound away from you. Our Small External Speaker comes bundled with a 10' cable. An optional 50" extension or our SP108-Z Deluxe Loudspeaker is also available. See our accessory page for details.

PG-1 Adapter

The PG-1 adapter allows you to record your own sounds into your FP38 caller without the need to send it in for reprogramming. Sounds can be recorded from any outside audio device such as a cassette player, CD player, MP3 player, microphone or computer.

This feature alone sets the FP38 apart from virtually any other comparably priced caller on the market.

16 Sounds

I have tried the rest now I use the best. FOXPRO is the #1 unit on the market today. The people at FOXPRO are always working to make their units the best money can buy. In the rare case that you have a problem, just call them and they will fix it. They are always talking to hunters to find out what they need to do to become the best. In 2003 the world coyote hunt was won using the FOXPRO. Watch in 2005 for a repeat of 2003. Keep up the good work! - Dusty Wood, Winner of the World Coyote Calling Championship

The 416 & 532 series deliver crystal-clear digital sound and has features, including external audio and speaker jacks, for greater in-the-field versatility. 416 includes 16 programmed sounds, 532 includes 32 sounds. You can choose from over 180 sounds or have your own (non - copyrighted) sounds programmed in.* The external audio jack lets you plug in a portable cassette, MP3 or CD player to play your favorite recorded sounds through the FOXPRO's speaker. And the speaker jack lets you plug in an external speaker (internal speaker will automatically shut off) and use up to 75 ft. to position speaker away from calling unit. The completely self-contained units sport powerful 15-watt speakers for plenty of volume in adverse conditions. They're also ultra durable - no motors, belts, gears or other moving parts. No tapes to malfunction or wear out, no wires or complicated set-up. This compact, comfortable one-hand carrying, unit weighs only 24 oz. and fits in a "fanny pack" or large coat pocket. No moving parts and easy on batteries even in cold weather conditions. Operate 20-24 hrs. on four AA alkaline batteries (included) or up to 18 hrs. on optional rechargeable NiMH batteries. Built in antenna that folds down for transport.

*NOTE: Sounds can be reprogrammed with the optional PG1-A adapter or by returning the unit to FOXPRO.

*NOTE: 416 & 532 comes with or without remote.

416 & 532 Features

- Programmed sounds 416 (16 sounds) 532 (32 sounds)
- TX5-LR Remote Operation (remote models only)
- Timer switch (non remote only)
- External Audio Input Jack (3.5mm)
- User Programming Cable
- External Speaker Jack (3.5mm)
- PG-1A Adapter-ready
- Tested down to -40°
- Runs on 4 "AA" batteries
- 2 Camouflage options
- 5 years parts & labor warranty
- Decoy Jack (with remote only)

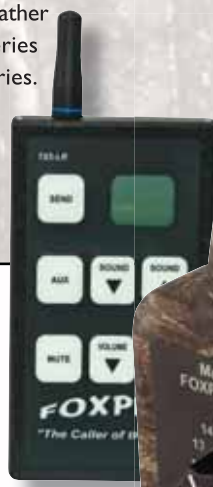

416 & 532 Available In:

532 with or without
TX5-LR Remote

I make my living calling predators, either for filming, guiding, or for damage control. I can't afford to use anything that is not 100% dependable. My FOXPRO calls have never let me down. When you have a FOXPRO call, you rest assured that you have the best call produced, and that it is backed by a best customer service in the industry. It's easy to be on the "Field Staff of such a great company. GO FOXPRO.

Byron South - www.comingtothecall.com

32 Sounds

TX5-LR Remote

The TX5-LR - The Industry's Longest Range Legal Transmitter

Rolling hills or forested terrain can greatly reduce the effective range of a remote. So while you may never place your caller at 700 yards, the extended range capability of the TX5-LR sure comes in handy when tough hunting conditions might turn a 200 yard remote into a 30 yard remote!

Why You Need a Remote

By placing the unit away from you, animals will focus on the caller. This keeps eyes off you, so you can focus on making a great shot.

TX5-LR Remote Features

Change Sounds Instantly

Change sounds using the up and down buttons, then press send to change them on the fly. There is no need to cycle through sounds.

Auxiliary Button

Wirelessly control FOXPRO's Jack-in-the-Box decoy or other FOXPRO approved devices. Start and stop the device using the AUX button.

Night Time Operation

Remote features a glow-in-the-dark keypad and red backlit LCD display.

100 Step Volume Control

for ultra smooth transition in volume changes.

Tactile Keypad

You can physically feel the button being pressed. (Excellent for hunters wearing gloves)

Mute Button

FX Series TX5-LR Remote

The NEW FX Series TX5-LR remote comes standard with the FX3 Game Caller and the Snow-Crow Pro. It has all of the features of the original TX5-LR remote.

PLUS:

Channel Selector, located on the top of the FX3 remote, you can set the switch to broadcast the remote signal to your caller on one of three channels (A, B or C). Older FOXPRO units run on channel A, but the FX3 gives you the option to set which channel you would like to use. This gives the user the ability to control up to three different FOXPRO units using the same remote control.

FX3

I have had the pleasure to be one of the first field staff members since 1998. The FOXPRO caller in my opinion is and has always been one step ahead of the competition. The staff at FOXPRO are always eager to stay ahead of the demands set by users of the FOXPRO, and have always listened to the suggestions of the customers and Field staff members to provide a top of the line product to us all. FOXPRO has provided me with a arsenal of sounds I am unable to produce with a mouth call. Being in the Animal destruction Control business it is an invaluable tool that provides me and my clients with a tool that produces year round, even on the most wary of predators. The remote allows me to go undetected, and makes a days work much more productive and rewarding. The staff at FOXPRO are hunters and callers, they understand the wants and needs of the user and strive to deliver what we ask for. One look at the members of the field staff alone is convincing in itself. The members of the FOXPRO field staff are all highly regarded, and well known callers who have been in the business for years and years. The gentleman on the field staff would not endorse the product without merit. The FOXPRO caller is light and Rugged. I have put my FOXPRO thru hell and back and it just keeps running, no matter what kind of weather. As they say (a man is only as good as his tools)
- Jerry Malbeck, Field staff member

The Volume You Want. The Professional Sound Quality You Need!

The new FX3 has the best combination of sound quality and features ever offered in a compact digital caller. To accomplish this, we used two different types of speakers. Why? It's simple! To get big volume, you need a horn speaker. The problem is, a horn speaker doesn't handle high and low frequency sounds all that well. On the other hand, a cone speaker handles highs and lows well, but is not as loud as a horn speaker. At FOXPRO, we used a horn speaker in the front, and a cone speaker in the rear to give you the best of both worlds.

Virtually Unlimited Sound Loop Possibilities!

The new FX3 will store and play MP3s, uncompressed WAV files or FOXPRO's new proprietary file type in its huge internal memory. Store up to 32 different 8.5 minute sound loops in MP3 format. Have a favorite 20 minute sound loop you want to use? No problem! Download it to your desired position and you still have room for 28 more 8.5 minute loops! Or put in 9 different 30 minute loops! Or use your computer editing program to compose your own loop with a variety of different calling sounds in one long loop so you don't need to work the remote! You can even put calling loops in the first few positions and fill up the rest of the FX3's memory with your favorite cruisin' tunes!!

Control Up To Three Different Callers From One FX3 Transmitter!

Just when you thought it couldn't get any better, FOXPRO has done it again. We've taken all of the great features of our TX5-LR long range remote control and added a channel selector switch. This offers many exciting new possibilities! For example: You can place up to three callers in different locations and play different sounds on all three from one FX3 remote control. Play a rabbit distress off to your left, a coyote challenge in front and a rodent squeak off to your right! If your buddy has a FX3, you can each control your own units independently, without interfering with each other's callers. Lastly, one of the channels is set to that of our 416 and 532 remote models, so you can keep your current FOXPRO caller, use it with your new FX3 and control them both from the FX3 Transmitter!

Download Sounds Direct From Your Computer!

It's as easy as plugging one end of the included USB cable to your computer, and the other to the FX3. Use your own sounds, or visit www.gofoxpro.com to download sounds from our huge sound library.

FX3 Available In:

FX3 Features

- **Dual Horn & Cone Speakers** - FOXPRO's FX3 features dual speakers, each with its own amplifier, for improved frequency response and increased volume & clarity. This makes for the loudest Game Caller ever! One speaker is located in the front of the unit, the other is located in the rear, and each is controlled with its own switch. You control whether you want the front speaker to play, the rear speaker to play, or BOTH speakers to play at the same time. You can also plug in an external speaker (sold separately), and have all three speakers play at the same time.
- **Internal Memory** - Includes 256MB of internal digital sound storage and can hold up to 32 different sounds. The unit is designed to play MP3's, uncompressed .WAV files, and fxp (our proprietary file type!) for the highest quality sound ever!
- **Easy to Connect** - FOXPRO's FX3 comes standard with a built-in USB 2.0 port for computer connection that allows for instant download of sounds - no reader/writer is necessary.
- **Backlit LCD Display** - FOXPRO's FX3 features a backlit LCD Display on the main unit making it visible in low-light conditions.
- **Multiple File Format** - Plays .WAV, .MP3 or .FXP formats. Bringing you the best clarity ever in a Digital Game Caller.
- **32 Programmed Sounds** - FOXPRO's FX3 comes standard with 32 pre-programmed sounds of your choice. Choose from the best sound library in the industry or use the supplied USB cable to transfer sounds from your computer to your caller in a matter of seconds. You can also download sounds to your FX3 by visiting our web site - GOFOXPRO.COM.
- **Charge Jack** - FOXPRO's FX3 comes equipped with a charge jack. If you are using FOXPRO's NiMH rechargeable batteries, plug your charger into this jack and it will directly recharge your batteries.
- **Auxiliary Jack** - FOXPRO's FX3 comes equipped with an auxiliary on/off jack to control our Jack-in-the-Box decoy or other approved devices.
- **External Speaker Jack** - Like our other units the FX3 comes equipped with an external speaker jack to add a third speaker for even greater volume.
- **External Audio Jack** - Use the external audio jack on the FX3's front panel to play sounds through your FX3's speakers from a MP3 player, CD, tape player, walkman, or any other audio source.
- **Infinite Sound Selection** - With 256MB of storage space and download capability, you can store virtually unlimited sound loops on your caller.
- **3 Camouflage Options** - Standard color is black. Also available in Prairie Ghost Snow, Mossy Oak Break-Up & Mossy Oak Brush.
- **Runs on 8 "AA" Batteries** - FOXPRO's FX3 runs on 8 "AA" Alkaline or rechargeable NiMH batteries.
- **Low Battery Detector** - The FX3 features a low battery detector that indicates when the unit's batteries need to be charged or replaced.
- **Virtually Unlimited Sound Loop Possibilities**
- **Five Year Warranty**
- **Built-in USB Port**

FX Series TX5-LR

The FX3 comes standard with FOXPRO's long-range FX3 remote control - the industry's best! The FX3's remote features:

- The ability to instantly change sounds
- Long Range Remote operation... the industry's longest range legal transmitter!
- 100 step volume control with quick step for ultra smooth transition in volume changes
- Pause/Mute button - mutes the sound and pauses the sound playback
- Auxiliary button (for control our Jack-in-the-Box decoy or other approved devices)
- Tactile feedback - you can physically feel the button being pressed (Excellent for hunters wearing gloves)
- Channel Selector, located on the top of the FX3 remote, allows you to set the switch to broadcast the remote signal to your caller on one of three channels - A, B or C. Older FOXPRO units run on channel A, but the FX3 gives you the option to set which channel you would like to use. This gives you the ability to control up to three different FOXPRO units using the same remote control.

AR4™

AR4 Features

- Powerful amplifiers for extreme volume
- Uses almost any audio source
- Remote control included
- Coaxer button
- Switch-selectable dual speakers
- Decoy control output jack
- External speaker jack
- Use internal batteries or external power
- 5-Year limited warranty

AR4 Remote

Use Virtually Any Audio Source

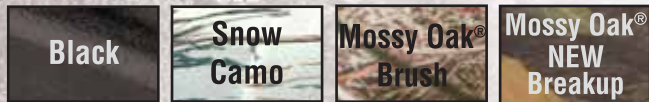

MP3 Player

Cassette

AR4 Available In:

If you own a MP3, CD or cassette player, have your own sounds and want to save some money on a FOXPRO remote caller, then the AR4 is the caller for you! Just connect the AR4 to the headphone jack with the included patch cable and you're good to go! The AR4 shares the same dual-speaker housing, high-power amplifier and battery configuration as our immensely popular FX3 digital caller, but is designed to use your external audio source. Like the FX Series of callers, separate switches allow the user to select either or both internal speakers. Jacks are provided for an external speaker and to charge or power the unit from an alternate power source. Run times vary depending on the volume used. At moderate volume levels, batteries will last for a full day of calling. For extended run times or extreme volume levels, an optional 12-volt gel-cell battery pack is available. Remote features include volume up/down, mute, auxiliary on/off (for controlling a decoy like the Jack-In-The-Box) and a coaxer button, which will automatically stop your external audio source, and activate the AR4's built-in rodent sound.* Some hunters like to switch to a rodent sound when predators begin their approach, and this gives you that option. *This sound cannot be changed.

The most advanced decoy ever... Jack-in-the-Box

Decoy from FOXPRO

The hypnotic action of the Jack-in-the-Box decoy can mesmerize incoming predators. This gives you the opportunity to make your shot while your target is focused on the decoy. The Jack-in-the-Box is especially useful for coyotes in heavily called areas where "educated" coyotes need a little extra enticement to come in close. Cats stalk it. Fox? Well, let's just say they have been called "suicidal" by some of our pro-staff and customers, who have had them rush in and attack the decoy. But don't worry. Replacement tops are available!

The delay mode gives you 60 seconds to get set up before the unit starts, then starts and stops the decoy at random intervals. A fast/normal mode switch controls the speed. For night calling, a built-in LED light can be used to softly illuminate the decoy top. One of the best features of the decoy, is that you can control the Jack-in-the-Box by connecting it to your FOXPRO remote caller.

What's more, everything stores conveniently inside the box and total weight is under 2 pounds with batteries.

For you crow hunters out there, FOXPRO now offers an owl top for the Jack-in-the-Box decoy! This deadly owl's moving head is sure to turn crows into kamikazes. If you who thought crow hunting was fun before, try this decoy for crow hunting nirvana!

Jack-in-the-Box Features

- Motion of the decoy can be controlled with your existing FOXPRO TX5-LR, FX or AR series of remote controls
- Choose from 2 speeds, fast or normal (100 hours of continuous use in normal mode)
- Delay/random mode for use without remote control
- LED light to softly illuminate the decoy for use at night
- Built-in speaker can emit its own rodent sound
- Decoy operates on 4 "C" batteries
- Proudly made in the USA!
- One year warranty

Remotely control the motion and sound with FOXPRO's TX5-LR, FX and new AR series of remote controls. Just plug one end of the included patch cable into your FOXPRO remote caller and the other into the Jack-in-the-Box. Then press the AUX button on the remote to start and stop the Jack-in-The-Box.

SNOW-CROW PRO

Add up to 4
SPI08 Deluxe Loudspeakers
For a total calling diameter of over 24 feet!

If you want to call in critters from the next zip code, this is the caller for you! The Snow-Crow Pro tips the scales at over 17 pounds, but is worth every ounce. With a 50 watt amplifier, and the ability to connect up to four of our extremely LOUD deluxe loudspeakers, you'll be able to produce more clean sound than with any other caller available. It's so loud that we even include earplugs and recommend that users always wear hearing protection while operating the caller.

With 12' feet of cable on each speaker, you can create up to a 24' diameter calling circle – perfect for strategically placing the speakers into your decoy spread. The Snow-Crow Pro's hi-capacity 12 volt gel-cell battery can last up to several days at moderate volume, but running four speakers at max volume can suck the juice out of just about any battery. To offset this, you can swap out the battery for a fresh one in about 15 seconds without tools, or power the unit from your vehicle's car battery.

Choose up to 32 sounds from our extensive sound list, or use the USB cable and the Snow-Crow Pro's internal storage to add your own sounds from your computer. The audio input jack can be used to attach a CD, MP3, cassette player or any other audio source. Flip a switch and you can use a microphone to turn the Snow-Crow Pro into a very powerful Public Address system.

Because the Snow-Crow Pro's deluxe loudspeakers are likely to see heavy use - from repeatedly winding and unwinding the cables and from bouncing around in pickup beds and ATV racks - we upgraded them to include heavy duty cable and beefy snap in connectors.

The included TX5-LR long range remote control gives full command of all functions from up to several hundred yards away and can even control a decoy or other approved FOXPRO device using our auxiliary input jack.

Snow-Crow Pro Features

- 50 watts of power for extremely LOUD volume
- Louder than any practical caller available
- 2 SPI08 deluxe speakers included
- Connect up to 4 loudspeakers
- Includes 32 digital sounds of your choice
- Virtually unlimited sound loop possibilities
- Built-in USB 2.0 port
- Quick-change hi-capacity battery
- Built-in battery voltage monitor
- External audio / microphone input
- Auxiliary jack for external device control
- TX5-LR long range remote control
- 5 year limited warranty

Includes:

- 32 pre-programmed sounds
- Battery charger
- USB cable
- Two SPI08 deluxe loudspeakers
- FX Series TX5-LR remote control
- Hi-capacity 12 volt gel-cell battery
- Earplugs

ACCESSORIES

The PG-I is available for the FP38 and records up to 15 second loops.

The PG-IA is available for the 416 & 532 and records up to 30 second loops.

PG-I & PG-IA Programming Adapters

These adapters allow you to record your own sounds into your FOXPRO caller without the need to send it in for reprogramming. Sounds can be recorded from any outside audio device such as a cassette player, CD player, MP3 player, microphone or computer. When recording your new sound into your FOXPRO caller, the original sound will be erased depending on which position the sound is recorded into. We recommend making a backup of the original sound before recording over it, so you will have access to it later.

Deluxe Camo Carry Bag

This padded cordura case offers protection for your caller while in transit and keeps everything together and in its place. In addition to a compartment for the caller, a zippered front pouch is provided for the optional remote transmitter. The case is fitted with a carry handle as well as a removable shoulder strap. Two zippered end pouches offer storage for the optional charger and spare batteries as well as the shoulder strap. Fits FP38, 416 & 532 models

NiMH Batteries/Charger

The optional NiMH batteries and charger will save you money in battery replacement costs. Standard alkaline batteries will operate the caller for 20 to 24 hours, depending on the volume used. NiMH batteries offer a run time of about 85% of alkaline batteries, but instead of throwing them away, you simply recharge them by connecting the wall charger to the caller. The charge time is about 14 hours for totally depleted batteries. The NiMH batteries can be recharged hundreds of times, and do not suffer from "memory" problems like NiCD batteries do. Our kit comes with four batteries and a charger for use with our 416 and 532 models. (This option is not available on Model FP38).

50 Ft. Speaker Cable

Getting the sound away from you is important. It offers many advantages to the hunter. That's precisely why FOXPRO makes a remote caller. However... for those who choose to use a non-remote model, an external speaker can be used to get the same effect. Our speakers come with a 10' cable, so you need this extension to get some distance.

Audio Patch Cable

Can be used to connect audio sources such as an MP3 player to the FOXPRO's audio input jack to the FOXPRO's audio input jack to play other sounds through the unit (cannot be used with Model FP38). Comes standard with the PG-I and PG-IA adapters.

Small External Speaker

For our non-remote units, we recommend the use of an external speaker to move the sound away from you. Our Small External Speaker comes bundled with a 10' cable.

Owl Decoy

For you crow hunters out there, FOXPRO now offers an owl top for the Jack-in-the-Box decoy! This deadly owl's moving head is sure to turn crows into kamikazes. For those of you who thought crow hunting was fun before, try this decoy for crow hunting nirvana!

SPI08-Z Deluxe Loudspeaker

Need extra volume? The new SPI08 is the perfect solution! This large external speaker is easily the smoothest and most efficient we have ever tested. Includes 12 feet of speaker cable and a 3.5mm mini jack.

SPI08 Deluxe Loudspeaker for Snow-Crow Pro

We know that Snow-Crow Pro Loudspeakers are bound to end up in pickup beds and on ATV racks. Plus, they are likely to get a lot more use than our other external speakers. That means more stress on the cables. To offset this, we took our already great SPI08 Deluxe Loudspeaker and made it more durable by adding heavy duty 12' cables and beefy snap-in connectors.

MIGHTY MOUSE™

For our customers who prefer hand calls, or who have a caller without a remote, we developed the new Mighty Mouse Coaxer. Simply hang the Mighty Mouse from a limb or place it away from you and activate it using the three-way switch. Flip the switch to the front and the rodent-type coaxer sound* starts to play immediately. It will continue to play at random intervals. Just leave it playing while using your hand calls or your non-remote electronic caller. Once the animal starts his approach, stop blowing your hand calls or turn off your caller. Since the Mighty Mouse is still playing, the animal will zero in on it - allowing you to concentrate on making a great shot. Flip the switch to the back to activate the built-in timer. This will provide a 60 second delay before playing, which will give you time to get settled into position. This unit has been tested for some time now, and has given great results! The Mighty Mouse operates on a single 9 volt battery, and will provide 50 hours of continuous use.

*This sound cannot be changed.

Mighty Mouse Features

- Random mode
- 60 second timer delay
- Only 8 ounces
- 50 hours continuous use on a 9 volt battery
- Landyard included
- 5 year limited warranty

Hats

Take pride in your FOXPRO caller by wearing one of our camo hats on your next hunt. Available in Mossy-Oak Obsession and Mossy-Oak Brush.

FX3™ AR4™ ACCESSORIES

NiMH Batteries/Charger

The dual speakers and amplifiers on the FX3 and AR4 use more power than our 416 and FP38 series of callers. This requires the use of 8 "AA" batteries instead of 4. To save money on alkaline batteries, FOXPRO recommends the use of NiMH batteries and our optional FX Series NiMH Charger.

12 Volt Power Pack

The FX3 & AR4 include dual amplifiers and dual speakers. While this hugely increases the volume capabilities of the caller, it also chews through batteries faster than our standard units. With our new 12V Gel Cell Power Pack, you can blast away - all day... and then some! Includes carry bag and charger.

Camo Carry Bag

This padded cordura case offers protection for your caller while in transit and keeps everything together and in its place. In addition to a compartment for the caller, a zippered front pouch is provided for the optional remote transmitter. The case is fitted with a carry handle as well as a removable shoulder strap. Two zippered end pouches offer storage for the optional charger and spare batteries as well as the shoulder strap.
